TITLE: Targeting advertising in a home retail banking delivery service  
DATE FILED: Jun. 6, 1995

ABSTRACT:

A practical system and method for the remote distribution of financial services (e.g., home banking and bill-paying) involves distributing portable terminals to a user base. The terminals include a multi-line display, keys "pointing to" lines on the display, and additional keys. Contact is established between the terminals and a central computer operated by a service provider, preferably over a dial-up telephone line and a packet data network. Information exchange between the central computer and the terminal solicits information from the terminal user related to requested financial services (e.g., for billpaying, the user provides payee selection and amount and his bank account PIN number). The central computer then transmits a message over a conventional ATM network debiting the user's bank account in real time, and may pay the specified payees the specified amount electronically or in other ways as appropriate. Payments and transfers may be scheduled in advance or on a periodic basis. Because the central computer interacts with the user's bank as a standard POS or ATM network node, no significant software changes are required at the banks' computers. The terminal interface is extremely user-friendly and incorporates some features of standard ATM user interfaces so as to reduce new user anxiety.

US PAT NO: 5,866,889 [IMAGE AVAILABLE] L3: 2 of 5  
TITLE: Integrated full service consumer banking system and system and method for opening an account  
DATE FILED: Jun. 7, 1995

ABSTRACT:

An integrated financial system that includes a single customer account that permits a customer to perform various financial transactions. The account includes at least banking components and brokerage components. A consistent user interface means is provided to allow a customer to access the account from a different sources including at least an automatic teller machine, a phone and a personal teller transaction. The account is flexible enough to include a variety of other components such as a credit card component, a line of credit component, a secured credit component and a money market component. A system and method for opening a single integrated account for a customer in a single session is also described.
